CHAPTER FOUR

DATA ANALYSIS AND RESULTS

This chapter presents data analyses and interpretations. The study examines **Effects of Drug Abuse and Video Game Addiction on Academic Performance of Senior Secondary School Students in Ojo Local Government Area, Lagos State**. A total of 120 students were sampled for the study. This chapter is presented under the following sub-headings:

- Presentation of the demographic information of respondents
- Analysis of research questions
- Analysis of null hypotheses
- Summary of findings

4.1: Presentation of Demographic Information of Respondents

Table 4.1
Frequency Distribution of Demographic Information of Respondents on the basis of Age

Levels	Frequency	%	Valid %	Cumulative %
13-14 years	32	26.7	26.7	26.7
15-16 years	39	32.5	32.5	59.2
17-18 years	49	40.8	40.8	100.0
Total	120	100.0	100.0	

Table 4.1 shows that 49 students representing 40.8% were 17-18 years old; 39 (32.5%) were 15- 16 years old; while 32 of the students were 13=14 years old.

Table 4.2
Frequency Distribution of Demographic Information of Respondents on the basis of Gender

Levels	Frequency	%	Valid %	Cumulative %
Male	55	45.8	45.8	45.8
Female	65	54.2	54.2	100.0
Total	120	100.0	100.0	

There were more female students (65; 54.2%) than the male students (55; 45.8%) as revealed in Table 4.2.

Table 4.3

Frequency Distribution of Demographic Information of Respondents on the basis of Living Arrangement

Levels	Frequency	%	Valid %	Cumulative %
Both parents	74	61.7	61.7	61.7
Single parent	18	15.0	15.0	76.7
Guardian/Relatives	27	22.5	22.5	99.2
Others	1	.8	.8	100.0
Total	120	100.0	100.0	

Table 4.3 shows that 74 students representing 61.7% were living with both parents, 27 students corresponding to 22.5% were living with either guardians or relatives while, 18 students representing 15.0% were living with single parents.

Answering Research Questions

Research Question 1

What are the drug use patterns among Senior Secondary School Students in Ojo Local Government Area, Lagos State? To answer this research question, the data collected were collated and subjected to descriptive statistics of frequency counts, percentages and mean. The result of the descriptive statistics of frequency counts, percentages and mean is presented in Table 4.5.

Table 4.5: Descriptive Statistics of Drug Use Patterns among Senior Secondary School Students in Ojo Local Government Area, Lagos State

Statement	Yes	No	Mean	Std. Dev.
Have used drugs other than those required for medical reasons	26	94	.22	.414
Unable to stop using drugs when they want to	23	97	.19	.395
Have felt bad or guilty about drug use	55	65	.46	.500
Have neglected their family or studies because of drug use	27	93	.23	.419
School performance suffered from drug use	29	91	.24	.430
Have experienced withdrawal symptoms when they stopped taking drugs	30	90	.25	.435
Drug use created problems with friends or family	29	91	.24	.430
Get through the week without using drugs	91	29	.76	.430
Parents have complained about their involvement with drugs	56	64	.47	.501
Have lost friends because of their use of drugs	34	86	.28	.453
Have gotten into fights when under the influence of drugs	27	93	.23	.419
Television viewing patterns (Grand Mean = .32, Standard Deviation = .439)				

Key: Yes = 1; No = 0 .
Decision Rule: If Mean is ≤ .49 = No; 0.5 to 0.1 = Yes

Table 4.5 shows that the grand mean is .32 and standard deviation is .439 on scale of two (2) implying that the students disagreed that they were engaged in drug abuse. This students' disagreement on the use of drugs are evident in activities whose mean and standard deviation are below the grand mean and standard deviation such as: unable to stop using drugs when they want to (mean = 0.19, standard deviation = 0.395); have used drugs other than those required for medical reasons (mean = 0.22, standard deviation = 0.414); have neglected their family or studies because of drug use (mean = 0.23, standard deviation = 0.419); have gotten into fights when under the influence of drugs (mean = 0.23, standard deviation = 0.419); school performance suffered from drug use (mean = 0.24, standard deviation = 0.43); drug use created problems with friends or family (mean = 0.24, standard deviation = 0.43), have experienced withdrawal symptoms when they stopped taking drugs (mean = 0.25, standard deviation = 0.435) and have lost friends because of their use of drugs (mean = 0.28, standard deviation = 0.453). However, students agreed to some drug abuse activities such as have felt bad or guilty about drug use (mean = 0.46, standard deviation = 0.5); parents have complained about their involvement with drugs (mean = 0.47, standard deviation = 0.501) and get through the week without using drugs (mean = 0.76, standard deviation = 0.442); implying that students engage in drug use abuse.

Research Question 2
What is the relationship between drug use abuse and academic performance among senior secondary school students in Ojo Local Government Area, Lagos State? To answer the question, the data collected were collated and subjected to Pearson Product Moment Correlation (PPMC) analysis. The result of the Pearson Product Moment Correlation (PPMC) analysis is presented in Table 4.6.

Table 4.6
Pearson Product Moment Correlation (PPMC) showing Relationship between Drug Use Abuse and Academic Performance among Senior Secondary School Students in Ojo Local Government Area, Lagos State

Variables	N	Mean	Std. Deviation	r	p-value
Academic performance	120	69.84	13.778	-.445	.000
Drug use patterns	120	.07	.250		

Table 4.6 reveals that there was a negative significant relationship between students drug use patterns and their academic performance among senior secondary school students in Ojo Local Government Area, Lagos State, r = -.445; N = 120; p = .000. This implies that as the students increase in their drug use patterns, there was a corresponding decrease in their academic performance and vice versa.

.

Testing of Hypotheses

Hypothesis 1

There is no significant difference in the academic performance of students addicted and those not addicted to drug use in senior secondary school in Ojo Local Government Area, Lagos State. To test the hypothesis, the data collected were collated and subjected to Student t-test statistics. The result of the Student t-test statistics is presented in Table 4.7.

Table 4.7
Student t-test statistics on the Difference in the Academic Performance of Students Addicted and Those not Addicted to Drug Use in Senior Secondary School in Ojo Local Government Area, Lagos State

Drug Use Patterns	N	Mean	Std. Dev.	df	t	p-value
No drug addiction	86	76.17	9.603	118	11.742	.000
Drug addiction	34	53.82	8.840			

Table 4.7 shows that students who are not addicted to drug use performed better with a mean of 76.17, than those who are addicted to drug use with a mean of 53.82. Further analysis revealed that there was a significant difference in the academic performance of students addicted and those not addicted to drug use in senior secondary school in Ojo Local Government Area, Lagos State, t= 11.742; df = 118; p < .05. Since, the t-test was significant, the null hypothesis which states that there is no significant difference in the academic performance of students addicted and those not addicted to drug use in senior secondary school in Ojo Local Government Area, Lagos State was rejected.

Hypothesis 2

There is no significant relationship between video game addictions and academic performance among senior secondary school students in Ojo Local Government Area, Lagos State To test the hypothesis, the data collected were collated and subjected to Pearson

Product Moment Correlation (PPMC) analysis. The result of the Pearson Product Moment Correlation (PPMC) analysis is presented in Table 4.8.

Table 4.8
Pearson Product Moment Correlation (PPMC) showing Relationship between Video Game Addictions and Academic Performance among Senior Secondary School Students in Ojo Local Government Area, Lagos State

Variables	N	Mean	Std. Deviation	r	p-value
Academic performance	120	69.84	13.778	-.923	.000
Video game addictions	120	2.54	1.483		

Table 4.8 reveals that there was a negative significant relationship between video game addictions and their academic performance among senior secondary school students in Ojo Local Government Area, Lagos State, $r = -.923$; $N = 120$; $p = .000$. This implies that as the students increase in their video game addictions, there was a corresponding decrease in their academic performance and vice versa.

Hypothesis 3

There is no significant difference in the level of addiction of drug use and academic performance among senior secondary school students in Ojo Local Government Area, Lagos State. To test the hypothesis, the data collected were collated and subjected to Analysis of Variance (ANOVA) statistics. The result of the to Analysis of Variance (ANOVA) statistics is presented in Table 4.9.

Table 4.9
Analysis of Variance (ANOVA) Statistics on the Difference in the level of Addiction of Drug Use and Academic Performance among Senior Secondary School Students in Ojo Local Government Area, Lagos State

Tests	Sum of Squares	df	Mean Square	F	Sig.
Between Groups	18267.902	2	9133.951	247.258	.000
Within Groups	4322.089	117	36.941		
Total	22589.992	119			

Table 4.9 shows that significant difference in the level of addiction of drug use and academic performance among senior secondary school students in Ojo Local Government Area, Lagos State, $F(2, 117) = 247.258$; $p < .05$. Since, the F-ratio was significant at 0.05 level of significance, therefore the null hypothesis which states that there is no significant difference

in the level of addiction of drug use and academic performance among senior secondary school students in Ojo Local Government Area, Lagos State was rejected. In order to find out the difference lie, a Scheffe Post Hoc test was performed. The result of the Scheffe Post Hoc test is presented in Table 4.9.

Table 4.10
Scheffe Post Hoc test showing the Multiple Comparisons of the variables

(I) Video Game Addiction Screening	(J) Video Game Addiction Screening	Mean Difference (I-J)	Std. Error	Sig.
Mildly addicted	Moderately addicted	17.602*	1.305	.000
	Highly addicted	30.174*	1.427	.000
Moderately addicted	Mildly addicted	-17.602*	1.305	.000
	Highly addicted	12.572*	1.583	.000
Highly addicted	Mildly addicted	-30.174*	1.427	.000
	Moderately addicted	-12.572*	1.583	.000

Table 4.10 shows that there was significant mean difference between mildly addicted and highly addicted students in academic performance ($p < .05$) with a mean difference of 30.17 in favour of the students with mild addiction. Furthermore, there was significant mean difference between mildly addicted and moderately addicted students in academic performance ($p < .05$) with a mean difference of 17.60 in favour of the students with mild addiction. Finally, there was significant mean difference between moderately addicted and highly addicted students in academic performance ($p < .05$) with a mean difference of 12.57 in favour of the students with moderate addiction. This implies that students with moderate addiction had the best academic performance.
